

ARMLESS

MN STEKLO™

Armless System

Aesthetic advantage & easy to use

Easier to close

Only by pushing, no need to pull down the top lock rod

Higher isolation

Minimizes the air stream that goes through the top lock hole

Smaller top lock

More elegant thanks to its reduced size

Smooth & silent functioning

Thanks to the quality of the components

Perfect for curtains and roller blinds

These can be installed next to the system without obstacles

Warranty

All MN STEKLO® products have 5 year warranty

The special configuration of the Armless System makes the system more comfortable by removing the protrusion made by the top lock and opening arm/dock.

The hole made in the track to install the system is the same as in the arm/dock system, but the space surrounding it has been minimized so the air stream is minimum.

It is a perfect configuration for homes and locals where aesthetic and interior design are priority, there is no protrusion from the arm/dock and the use of curtains and rollers blind is easy.

Features

- Eliminates the protrusion made by the arm/dock on the top track.
- The top lock is reduced due to the new reduced dimensions of the hole needed for the panel opening.
- Because of this space reduction the air flow is reduced.
- The Armless System is barely unnoticed, which results into an excellent improvement aesthetic and visual.

ARMLESS SYSTEM

STANDARD SYSTEM

Operating advice

It is the perfect configuration for those clients who want to avoid protrusions in their frameless systems. By removing the arm/dock, the system allows installing special decoration elements such as curtains, rollers blinds and many others. Besides this, also makes more easy to operate the system when closing it, just by pushing the door, there is no need to pull down any rod or lock.

Manufacturing & installing

- Components are made of aluminium and polyvinyl acetate, which once are combined, make an extremely silent and smooth functioning.
- Full adjustment on every single panel.
- Compatible with all other special configurations.
- For closing the door panel, it is no necessary to pull down the top lock. This closes just by pushing it.
